

## **Bell Mobility and IgeaCare Systems Inc. bring to market eHealth mobile solutions for chronic disease management (CDM)**

***Communication convergence creates a solution to answer the needs of Chronic Disease Management for Patients and Healthcare Providers***

VANCOUVER, May 5 /CNW/ - Today at the eHealth Conference in Vancouver BC, Bell Mobility and IgeaCare Systems Inc., announced the launch of the next generation of eHealth solutions combining IgeaCare' Healthanywhere(TM) intelligent software solutions with Bell's network.

IgeaCare is an innovator in the field of intelligent healthcare solutions (e-health) for patients at home or on the go. The solution can remotely handle CDM (Chronic Disease Management) by capturing medical information from wireless medical devices and establishing video visits (e-visits). The solution automates electronic record of care and track patient outcomes, making it possible to implement integration of patient data into an Electronic Health Record (EHR).

The Healthanywhere(TM) software is delivered securely over the cellular network by way of smart phones such as BlackBerry's, portable tablet PCs, home patient stations, stationary and mobile kiosks. Telehealth solutions have numerous applications such as screening and diagnosis of medical conditions, daily monitoring of vital signs and medication reminders, secure real-time transfer and access to medical information and provide an information portal for families. "As healthcare becomes more specialized and less hospital-centric, patients are receiving care from an increasing number of providers and at different locations. Patients are also becoming more proactive in managing their health. Bell's offering enables healthcare providers and enterprises to reduce the cost of delivering services with the right mix of technology and hands on care" says Martin Beauclair Sr. Vice President of Sales and Business Development for IgeaCare Systems Inc.

"We recognize that healthcare professionals and citizens require a wide variety of services and the needs of both of these user groups are quite different. At Bell we take care to transmit information securely and efficiently so hospitals and healthcare providers can be more accessible and accountable to Canadians." says Philippe Jetté, Vice President Data Solutions for Bell Mobility.

### **About Bell Canada**

Bell Canada is Canada's national leader in communications with 28 million customer connections across the country. The company provides consumers with simple solutions to all their communications needs, including telephone services, wireless communications, high-speed Internet, digital television and voice over IP.
