“Quality care through innovative technology...IgeaCare”

Introducing the igeacom300 from IgeaCare Systems Inc. The igeacom300 is a state-of-the-art nurse call device that seamlessly integrates all the functions of a traditional nurse call device and provides unsurpassed reliability through telephony-based technology. This device enables total connectivity; resident to staff, staff to resident, and residents outgoing and incoming local and long distance calls. The igeacom300 is designed to seamlessly integrate with a Private Branch eXchange server and any private wireless telephone network or pocket paging system.

Some of the key benefits of the igeacom300 are:

- Endless flexibility in initial and redirection of a nurse call.
- Built in escalation to any telephone(s) both inside and outside the facility.
- Multiple call points.
- Water resistant traditional hardwired pull cords, push button call cords, and dome lights.
- Multiple color dome lights.
- Instant two-way speech between resident and nurse/aid.
- Programmable software allows you to toggle on/off to all features and functions of the igeacom300.
- Each device can be programmed individually to meet the special care needs of a particular resident.
- Programmable buttons for system announcements, menu or activities.
- Clean, quiet and non-intrusive feel with brightly colored call buttons.
- Can easily be upgraded to include all the wireless components of the igeacom500.
