

Emergency Monitoring Unit

The **miALERT** is an affordable emergency communication solution that does not compromise on features or functionality.

miALERT benefits both the resident and the facility

- Instant two-way voice communication for immediate emergency assessment and response.
- Wireless transmitters activate the miALERT from anywhere within the resident's apartment.
- Simple to program, reconfigure and add additional remote transmitters as required.
- Unprecedented ease of installation and programming – **no wiring required.**
- Add-on capability for wireless pull cords and accessory device integration modules for other wired sensors.
- Integration modules for other sensors including smoke detectors, flood detectors, door contacts, temperature sensors, carbon monoxide detectors, toilet sensors and check-in devices.
- Unique solution which provides three communication methods tailored to different notification requirements: miFIVE Call Stream; miHOSTED Escalation/Notification; and miCALL Center.
- Low cost and scalable solution offering exceptional value as a nurse call system for residences of all sizes.

miSOLUTION

- The miALERT is integrated into the facility's telephone system
- The miALERT only requires a telephone outlet and A/C power source in each area
- The system is activated when residents press their remote pendant button
- Portable telephones can allow response personnel to handle calls from anywhere
- The miALERT has built-in battery backup power in the event of a power failure
- Ask about our miALERT Maintenance Program and other features

miALERT

Included Accessories

Watch strap

Bangles

Neck cord

Belt clip

The miALERT operates in three modes

1. miFIVE Mode

miALERT will call five numbers in sequence once triggered - numbers are customizable.

It will continue to call the list until it receives a response.

2. miHOSTED Mode

miALERT contacts our central server during an emergency.

Server notifies and escalates based on pre-determined call flow information.

Information is recorded for reporting.

Notification is sent to a landline, mobile device, email and/or TTS.

3. miCALL Center Mode

miALERT contacts our call centre where an emergency or personal contact is notified or dispatched.
